# MRCA TRAINING OPPORTUNITIES HOSTED BY

The Midwest Roofing Contractors Association (MRCA) is pleased to announce its partnership with Beacon Roofing Supply to deliver the MRCA's new Certified Safe™ Authorized User Level safety training program! Together with select Beacon locations, the MRCA now brings live, in-person training for both the new **Hot Air and Induction Welding Safety Training (HAWT)** and the **CERTA Certified Roofing Torch Applicator Programs** to convenient locations near you!

The MRCA's Certified Safe® safety programs are specifically designed to help roof workers understand the nature of the hazards they face when they go to work and how to best control the risks when working with these systems. The MRCA's new Hot Air and Induction Welding Safety Training Program (HAWT) is an OSHA compliant safety program that teaches the methods for identifying and controlling the hazards that workers face during the installation of roofing systems using electrically powered equipment. The CERTA Roofing Torch Safety Program was originally developed by the MRCA in the early 1990's before adoption by the NRCA in 2002. In 2020 the MRCA introduced a new CERTA Applicator Training Program that has updated the original CERTA program information with standardized and unique content. Both programs are taught by a group of specially trained Safety Instructors nationwide.
